Make your own copy first

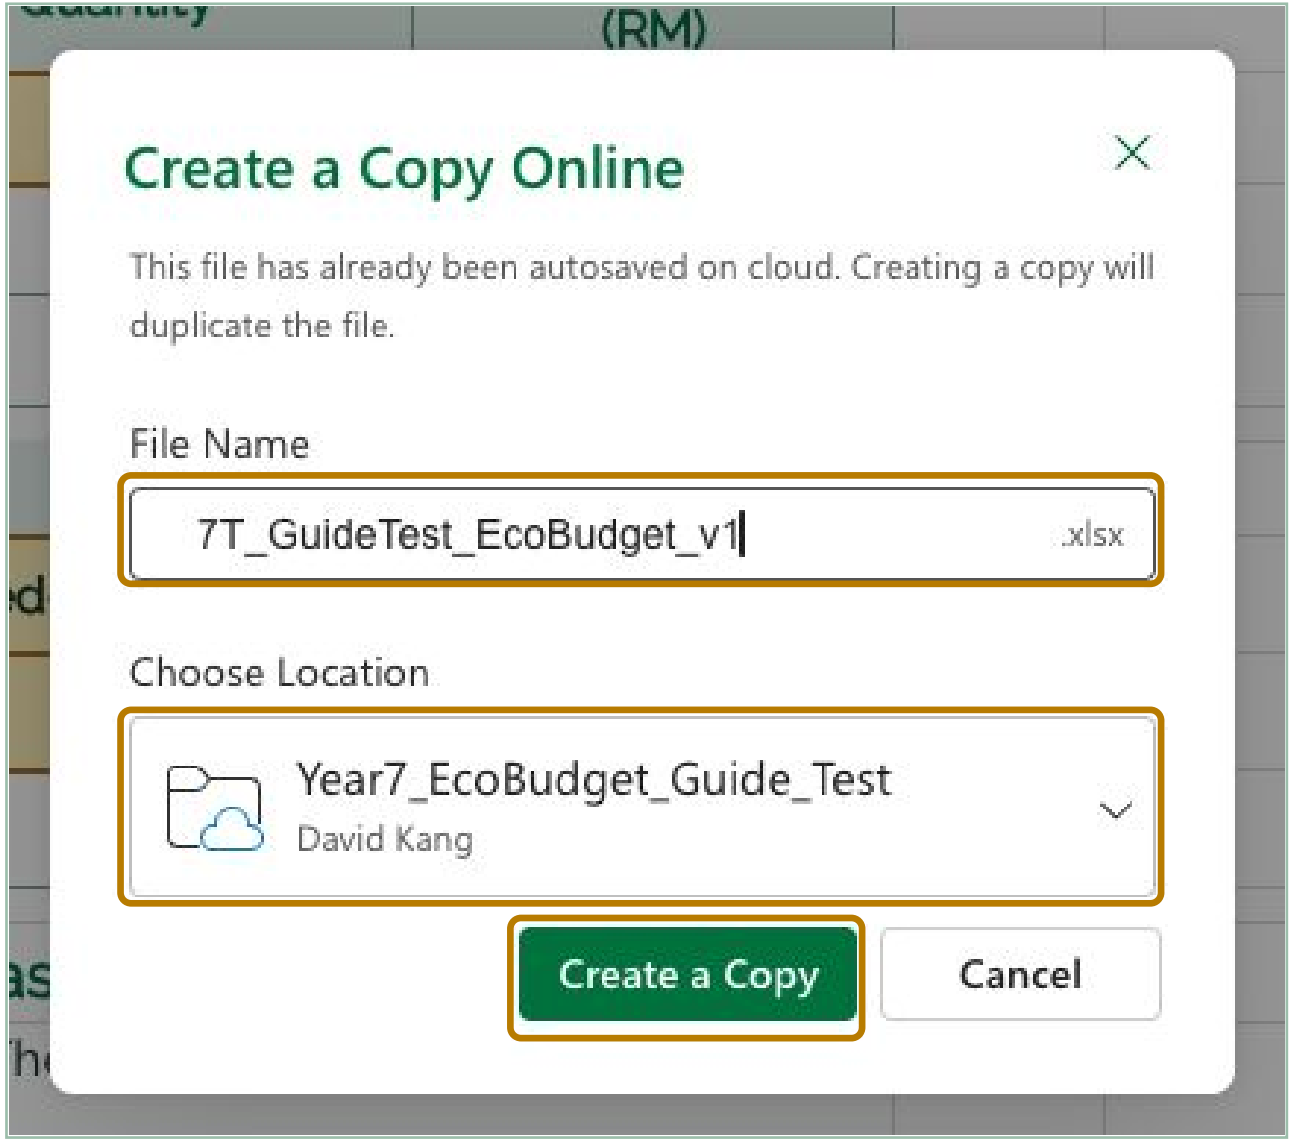

Click File.

Choose **Create a Copy**, then **Create a copy online**.

This keeps your work separate from the starter.

Already given your own editable copy in Teams? Keep using that copy. Do not make another.

Choose a name and school storage

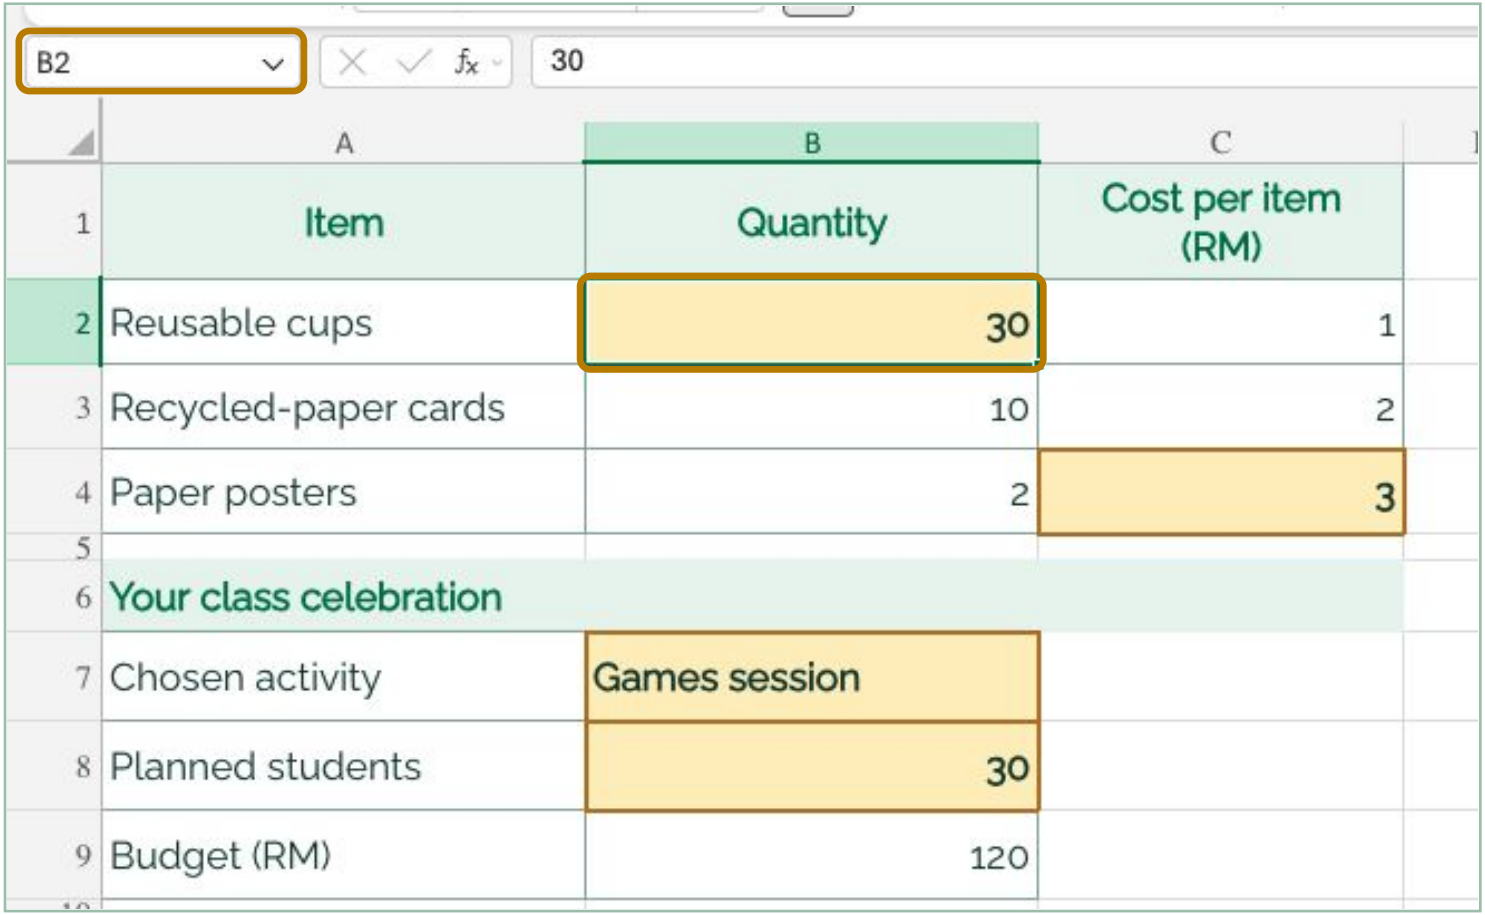

Use a name such as:
7T_Aisha_EcoBudget_v1

Choose **your school OneDrive** and your Computing folder.

Click **Create a Copy**.

The picture uses a teacher test folder and test name. Yours will be different. Do not look for the test folder.

Find cell B2

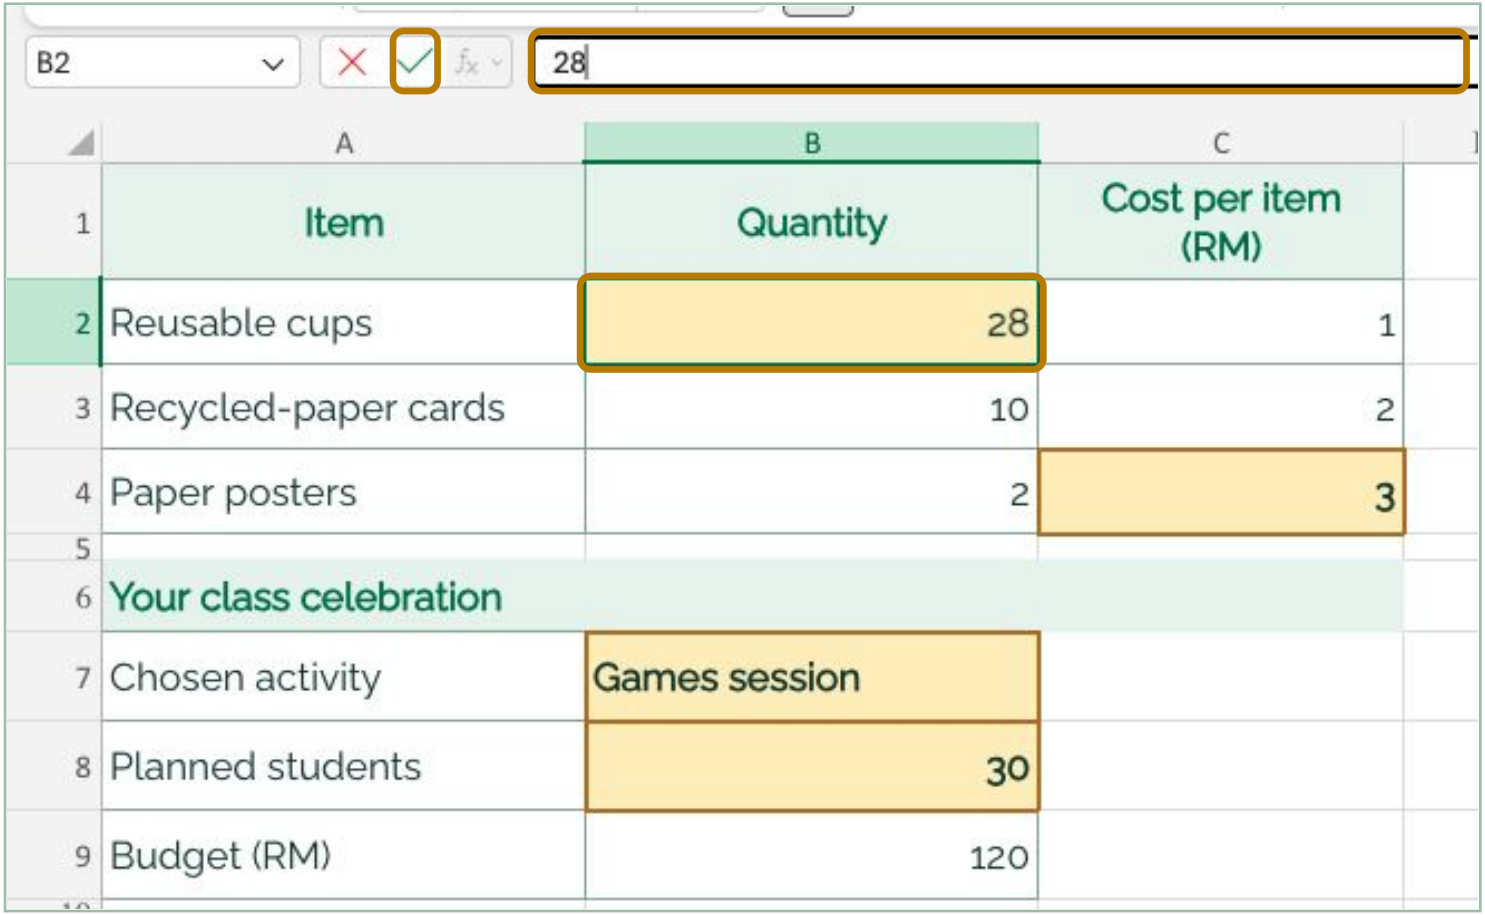

B2 means column B, row 2.

Click the yellow cell containing **30** beside Reusable cups.

Check the small address box: it should show **B2**.

Hard to select? Click the address box, type B2, then press Enter.

Change 30 cups to 28 cups

With **B2** selected:

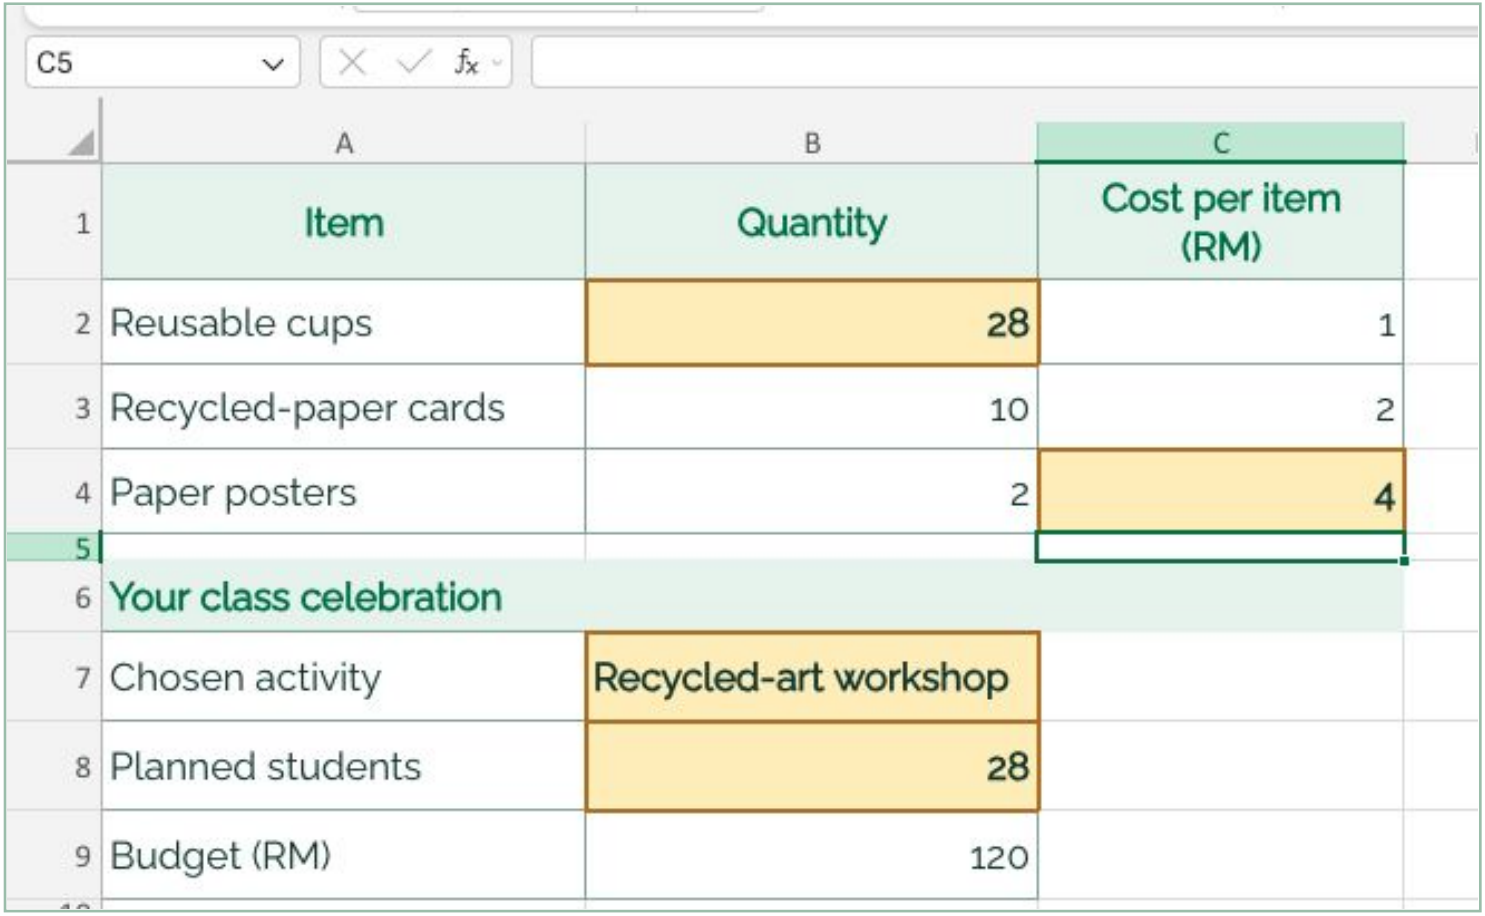

1. Click the long entry bar above the grid.

2. Select the old number. Type **28**.

3. Press **Enter** or click the green **tick**.

The cell must now show 28. Do not leave the number half-edited.

Complete the other three yellow inputs

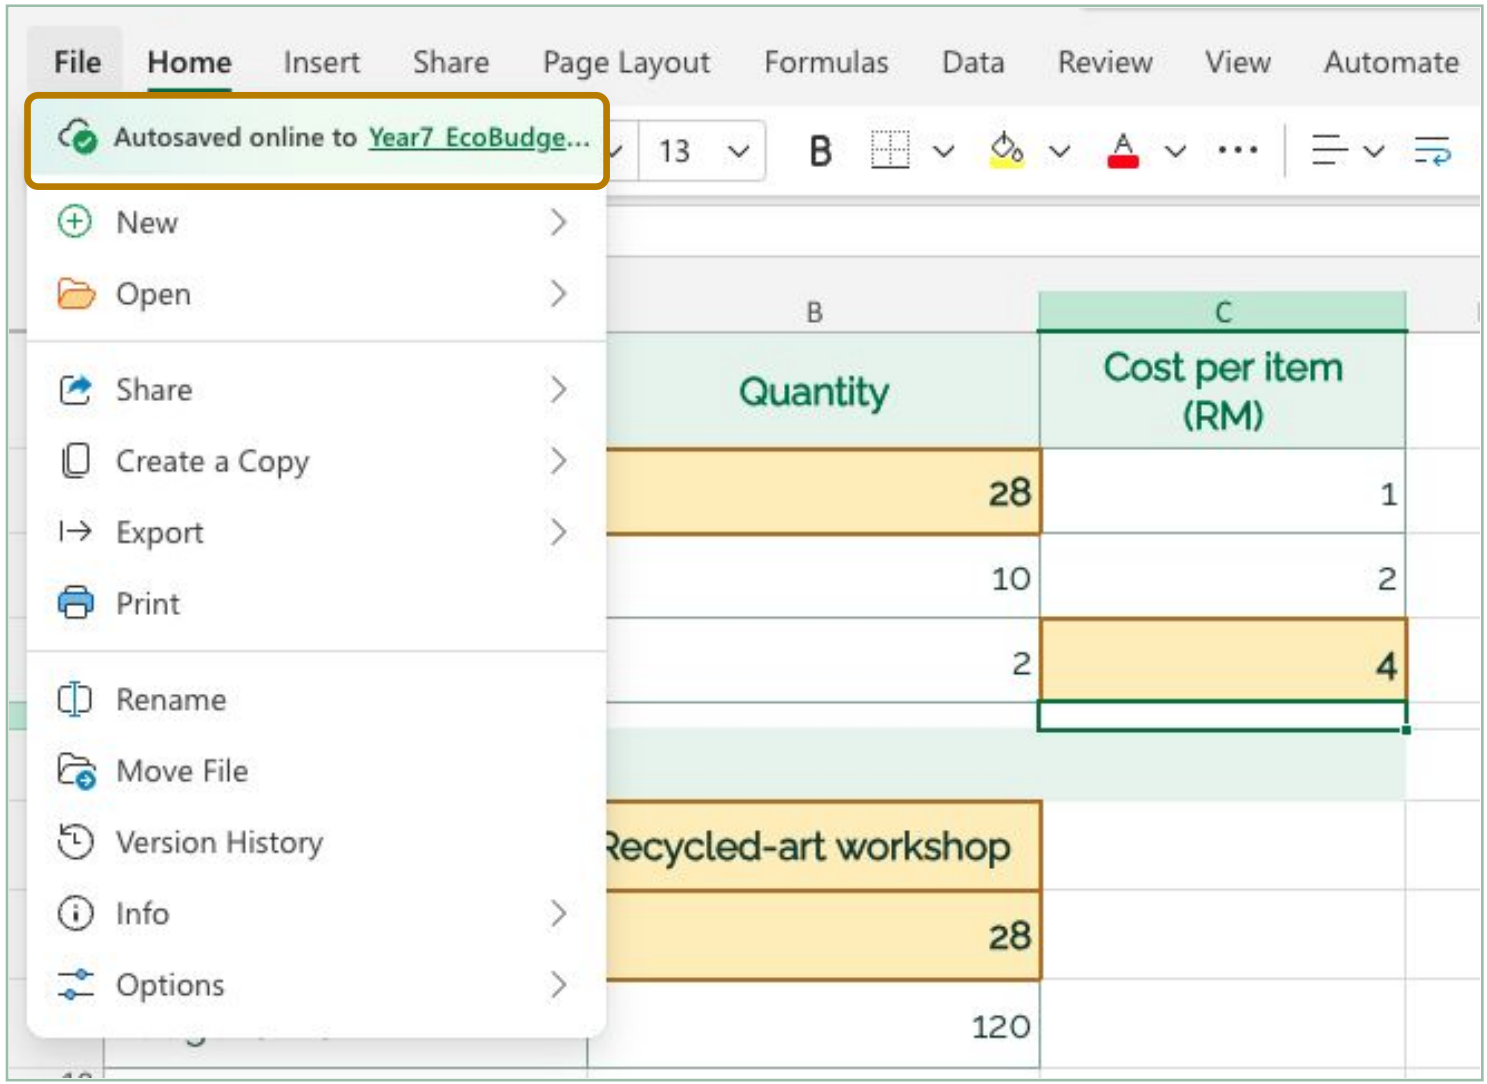

B7 - choose one:
Games session
Quiz celebration
Recycled-art workshop

B8: type 28 students.

C4: type 4 for the price of one poster.

Keep B2 = 28 and B9 = 120.
Type numbers only: 4, not RM4.
B2 and B8 do not update each other yet.

Check that your work is saved

Click **File**.

Look for **Autosaved online to...** and check the folder.

Close the workbook. Open the **same named file** from that folder.

Check B2, B7, B8 and C4 again.

Your folder name will differ from this teacher test folder. If an error says saving failed, keep the file open and ask for help.

Open Excel, not another browser tab

1. Open the teacher's workbook

Use the workbook your teacher provides in Teams. Choose **Open in Excel** when offered. Sign in with your **school account**.

2. If the App Store opens

If Excel is installed, leave the App Store and open **Excel** from the Home Screen. Find your file in **Recent** or **Open**. If Excel is missing, tell your teacher.

3. Use one copy

Use your own editable Teams copy. For a shared starter, first use File: **Duplicate / Save a Copy**. Name it and save to your school OneDrive before editing.

4. If you cannot type

Check that you are signed in to the correct school account. If the file is read-only, ask your teacher. Do not keep opening new copies.

App guidance, not an iPad screenshot. Button positions vary by app version. Check once on your iPad with your teacher.

Tap, edit, confirm, then check your save

1. Edit B2

Tap B2. Tap the entry bar showing **30** (or double-tap the cell). Replace 30 with **28**. Tap the **tick / Return** to finish the edit.

2. Complete your inputs

Edit **B7** with one activity. Change **B8 to 28** and **C4 to 4**. After each edit, tap the tick / Return. Use page 5 to check your values.

3. Check your file location

Check your file name and school OneDrive location in the File menu. If the file is only **On My iPad**, ask your teacher to help move it to school storage.

4. Reopen and check

With AutoSave on and a school cloud location, wait for saving to finish. Go back to Excel's file list. Reopen the same file. Check all four yellow cells.

Help words: cell / 单元格 row / 行 column / 列 save / 保存

iPad instructions require a real-device check. Never assume saved just because the keyboard has closed.
