

Year 7 Computer Science

Practical Learning Checkpoint

TURTLE RESCUE

Collect the power cells and find the safe exit.

Student name: _____

Class: _____ **Date:** _____

Duration: 40 minutes

Core tasks: 20 marks

YOUR MISSION

A robot needs two power cells, A and B. Then it must go around a blocked room to reach EXIT.
Write two short Python Turtle programs. They draw route lines, not a complete game.

WAGBA: Predict, run, fix and extend Turtle code to reach a target safely.

Knowledge: x is left/right; y is up/down. A turn changes direction.

Skills: Change a command, run the program and check its drawing.

Understanding: The numbers and order of commands change the route.

How to work

1. Use the class Turtle editor, this paper and its command reminders.
2. You may discuss ideas with a partner or group. Run your own program and record your own choices and final commands.
3. Do Predict before Run. An incorrect attempt does not stop you: check, change one command and try again.
4. Use the picture guides on pages 2-3 before the timer starts. Do both core tasks on pages 4-7. Extra challenges are on pages 8-10 and have no marks.
5. No screenshots or long explanations are required. Show your code and drawing to your teacher. Your completed paper is the assessment record.

Timing: 3 min mission | 12 min Task 1 | 16 min Task 2 | 6 min finish/extra | 3 min check

Picture guide 1 - Open the workspace

Use this guide before the 40-minute assessment begins. Your device may look slightly different.

1. In Teams, open Classes. Find this class:

2. Open the class, then tap Classwork:

Open the practical link your teacher provides, not the written-assessment cue. If the practical link is not in Classwork, use this direct address:

<https://mrdavekang.github.io/cswithmrdave/year7-practical-turtle-rescue/>

This is the first page of the app:

Open your workspace

Your name

Your class

Open Task 1

Open a JSON backup

3. Tap Your name.

Type your name. Each pupil writes their own name on the paper. If you share a device, your group may use one workspace.

4. Tap Your class.

Type 7T, or the class your teacher gives you.

5. Tap Open Task 1.

Task 1 opens with the starter code already in the code box. You do not need to type it again.

Language and device help stay at the top.

Language help

English

Device help

Choose English + Chinese for navigation and vocabulary help. Python stays in English. Device help explains typing and saving.

ONE PLACE FOR ANSWERS

Read the task and write answers on this paper. The app is only your programming workspace.

Picture guide 2 - Edit, run and look

Keep the paper beside the screen. No digital questions or completion checkboxes.

Use 1 · Task 1 for all of Task 1. Change to 2 · Task 2 only when the paper tells you. Each task keeps its own code.

Your workspace before the first run:

6. Press Run when the paper says RUN.

Read and predict first. Run draws the whole program from the beginning. Stop ends a run. Replay shows the last drawing again.

7. Tap inside the code to change it.

Change only the command the paper asks you to change. Then Run again. Keep using the same code box for Modify and Make.

8. Look at START and the targets.

The map is supplied. Your program draws the line. x is left/right; y is up/down. Point to the start and finish with your partner.

9. Read End after the drawing stops.

It shows where your code actually stopped, not a mark. Compare it with the target on paper. If different, discuss one change and run again.

Download .py only if your teacher asks. Restore starter replaces your edits after a warning. Undo edit goes back one edit. No pupil screenshots or PDF export are required.

Task 1 - Collect A, then B

App: tap 1 · Task 1. Stay in this workspace for all five steps. [10 marks total]

TARGET MAP

START = (-120, -80)

A = (-120, 20)

B = (40, 20)

STARTER CODE

```
1 import turtle as t
2
3 t.penup()
4 t.goto(-120, -80)
5 t.pendown()
6
7 t.goto(-120, -20)
8
9 t.done()
```

x = left / right

y = up / down

Each grid square = 20 units.

BEFORE YOU START

Task 1 has this code ready. Do not retype it. Read line 7 together. Each person predicts on paper before Run. The map is supplied; your code draws only the line.

01.1 PREDICT

[1 mark]

Read line 7. Where will the Turtle stop? Tick one before running.

☐ (-120, -20)

☐ (-120, 20)

☐ (40, 20)

01.2 RUN

[1 mark]

Press Run. Look at the end of the line. Did it reach A? Tick one.

☐ Yes

☐ Not yet

01.3 INVESTIGATE

[1 mark]

Compare line 7 with A = (-120, 20). Which number must change?

☐ The x number

☐ The y number

Next: turn to page 5. Keep the app on Task 1.

Task 1 - Fix and continue

Goal: one continuous line from START to A, then from A to B.

01.4 MODIFY

[3 marks]

Change only the y number in line 7 so the line reaches A. Run again.

CHECK YOUR DRAWING

A is (-120, 20). The first line should go straight up from START to A. Keep the x number unchanged. You can try again if the line stops in the wrong place.

☐ I ran my changed program and checked its endpoint.

01.5 MAKE

[4 marks]

Add one new `t.goto` command to reach B = (40, 20). Put it after the command for A and before `t.done()`. Run the whole route.

COMMAND REMINDER

`t.goto(x, y)` moves to a position. The first number is x; the second is y. Keep the pen down so the route is a continuous line. Keep your working command for A.

Copy your TWO successful route commands below. Do not copy the setup or `t.done()`.

Your successful drawing commands

Final check

- ☐ The line starts at START, not at the centre.
- ☐ It reaches A first, then B.
- ☐ I ran the final program and checked the two line sections.

Tell a partner what each route command does. Show your final drawing to your teacher. Tap Download .py only if asked. Turn to page 6, then tap 2 · Task 2 in the app. Task 1 stays saved.

Task 2 - Find the safe exit

App: tap 2 · Task 2. This opens its own starter; Task 1 stays saved. [10 marks total]

TARGET MAP

STARTER CODE

```
1 import turtle as t
2
3 t.penup()
4 t.goto(40, 20)
5 t.pendown()
6
7 t.forward(80)
8 t.right(90)
9 t.forward(80)
10
11 t.done()
```

Fresh Turtle faces right.

x: left/right. y: up/down.

B = (40, 20)

EXIT = (40, 100)

Corner 1 = (120, 20)

Corner 2 = (120, 100)

YOUR JOB

Task 2 has its starter ready. Go from B to corners 1 and 2, then EXIT, outside the room. One turn is wrong. Each person predicts before Run.

02.1 PREDICT

[1 mark]

After `t.right(90)`, will the next line go up or down? Tick one.

☐ Up

☐ Down

02.2 RUN

[1 mark]

Run the starter. Which way did the second line go? Tick one.

☐ Up

☐ Down

02.3 INVESTIGATE

[1 mark]

Which command changes the direction? Tick one.

☐ `t.forward(80)`

☐ `t.right(90)`

☐ `t.pendown()`

Task 2 - Repair the turn and escape

Goal: B -> corner 1 -> corner 2 -> EXIT. The line must not cross the blocked room.

02.4 MODIFY

[3 marks]

Replace the wrong turn so the second line goes UP to corner 2. Keep both distances at 80. Run and check.

LOOK AT THE MOVEMENT

`t.forward(80)` moves 80 units in the direction the Turtle faces. `t.left(90)` and `t.right(90)` turn the Turtle without moving it. Check where it faces before the next move.

☐ I ran the repaired program and reached corner 2 = (120, 100).

02.5 MAKE

[4 marks]

Continue LEFT along the top of the room to EXIT = (40, 100). Add a `t.goto` command OR a turn and a forward command before `t.done()`. Run the complete route.

Copy all your successful route commands below, starting with `t.forward(80)`. Do not copy the setup or `t.done()`.

Your successful drawing commands

Check and finish

- ☐ My route visits corner 1, then corner 2, then EXIT.
- ☐ The line stays outside the blocked room.
- ☐ I can point to one changed command and tell a partner what it does.

Show the final drawing to your teacher. Keep this tab open until checked. Hand in your paper. If time remains, turn to pages 8-10 and tap 3 · Extra challenges. Choose Rectangle, Triangle or My drawing to match your paper.

Extra challenge 1 - Rectangle builder

App: 3 · Extra challenges. Choose the matching workspace below. No marks.

YOUR NEW GOAL

Tap Rectangle in the app. Turn the sample square into a rectangle 80 units wide and 40 units tall. Then move the whole drawing to the right side of the screen.

```
1 import turtle as t
2 t.penup()
3 t.goto(-140, -60)
4 t.pendown()
5 t.forward(60)
6 t.right(90)
7 t.forward(60)
8 t.right(90)
9 t.forward(60)
10 t.right(90)
11 t.forward(60)
12 t.right(90)
13 t.done()
```

FOLLOW PRIMM

PREDICT
Read the sample. Which shape will it draw? Say your prediction to a partner.

RUN
Run the sample and look at its four equal sides.

INVESTIGATE
Find the four forward commands. The 1st and 3rd draw the width; the 2nd and 4th draw the height.

MODIFY
Use distances 80, 40, 80, 40. Keep all four turns at 90. Run again.

MAKE
Change the starting position to (20, -60). Run your rectangle on the right side of the screen.

Record only your eight movement/turn commands. Do not copy the setup. Starting position for your final drawing: (20, -60).

Your successful drawing commands

Your successful drawing commands

Write commands 1-4 in the left box, then 5-8 in the right box.

Extra challenge 2 - Triangle explorer

App: 3 · Extra challenges. Choose the matching workspace below. No marks.

YOUR NEW GOAL

Tap Triangle in the app. Make a larger triangle with three 90-unit sides. Then place it on the right of the centre. The sample uses 120-degree turns between sides.

```

1  import turtle as t
2  t.penup()
3  t.goto(-120, 0)
4  t.pendown()
5  t.forward(60)
6  t.left(120)
7  t.forward(60)
8  t.left(120)
9  t.forward(60)
10 t.left(120)
11 t.done()
```

FOLLOW PRIMM

PREDICT

How many sides will the sample draw? Tell a partner before running.

RUN

Run it. Check that the three sides join.

INVESTIGATE

Point to the three moves and the three turns. The 120-degree turn is how far the Turtle turns, not the triangle's inside angle.

MODIFY

Change every forward distance from 60 to 90. Keep each turn at 120. Run the larger triangle.

MAKE

Change the starting position to (40, 0). Run again. Compare its new position with the sample.

Copy the six successful movement/turn commands below. Do not copy the setup. Final starting position: (40, 0).

Your successful drawing commands

Extra challenge 3 - My own drawing

App: 3 · Extra challenges. Choose the matching workspace below. No marks.

YOUR NEW GOAL

Tap My drawing in the app. Create a robot face or a small house using at least six drawing commands. Include at least two turns or changes of direction.

```
1 import turtle as t
2 t.penup()
3 t.goto(-100, -40)
4 t.pendown()
5 t.goto(-100, 40)
6 t.goto(-20, 40)
7 t.done()
```

FOLLOW PRIMM

PREDICT

Read the sample. Say where its two lines will go.

RUN

Run it to see an upside-down L on the left of the centre.

INVESTIGATE

Point to the start and the two destinations. The first coordinate in each pair is x.

MODIFY

Reflect the L to the right: change the x values -100 and -20 to 100 and 20. Keep y values the same.

MAKE

In the same editor, keep import and t.done(). Replace the middle commands with your own robot face or house. Run, change and improve it.

Sketch your own idea here:

Copy six successful drawing commands from your own design. Continue on the back if needed. Do not copy import, setup or t.done().

Your successful drawing commands
